/note="Organ: pooled; Vector: pT713D-Pac (Pharmacia) with
a modified polylinker; Site_1: Not I; Site_2: Eco RI;
Equal amounts of plasmid DNA from three normalized
libraries (fetal lung NbHL19W, testis NHT, and B-cell
NCI CGAP GCB1) were mixed, and ss circles were made in
vitro. Following HAP purification, this DNA was used as
tracer in a subtractive hybridization reaction. The driver
was PCR-amplified cDNAs from pools of 5,000 clones made
from the same 3 libraries. The pools consisted of
I.M.A.G.E. clones 297480-320897, 682632-687239,
726408-728711, and 729096-731399. Subtraction by Bento
Soares and M. Fatima Bonaldo. "

This is the 5' sequence of the clone insert
Clone from S. Wiemann, Wolecular Genome Analysis, German Cancer
Clone from S. Wiemann, Wolecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz-heidalberg.de;
sequenced by Qiagen (Hilden/Germany) within the cDNA sequencing
consortium of the German Genome Project.
This clone (DKFZp686W05227) is available at the RZPD in Berlin.

Baccala,G.P., Pradel,F.K., Bedin,F., Sodoyer,M., Ott,C., Mallet,F.,
Perron,H. and Mandrand,B.

Retroviral nucleic material and nucleotide fragments, in
particular, associated with multiple sclerosis and/or rheumatoid
arthhitis, for diagnostic, prophylactic and therapeutic uses
Patent: JP 2002509437-A 7 26-MAR-2002;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  PAT 18-SEP-2002
                                                                                                                                                                                                        Homo sapi

Oy 1441 GAAGCTGTAAAGCTACAGATGGTCTTACAAATGGAACCCCA 1481	AL390039/c LOCUS AL390039 LOCUS AL390039 DEFINITION Human DNA sequence from clone RP13-383KS on chromosome XQ22.1-24	Contains ESTs, STSs and GSSs. Contains a novel gene and a novel gene similar to NUP62 (nucleoporin 62kD), complete sequence. ACCESSION AL390039.10 GI:10186780	HTG; nucleoporin; Mr Homo sapiens (human) Homo sapiens Eukarvota: Metazoa;	Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo. REFERENCE 1 (bases 1 to 162579) ATTHORS Graffam, D. ATTHORS Dispert Submission	JOURNAL Submitted (19-DEC-2000) Sanger Centre, Hinxton, Cambridgeshire, JOURNAL Submitted (19-DEC-2000) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonarequestsGeanger.ac.uk		corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. The following abbreviations are used to associate primary accession mumbers given in the feature table with their source databases:	Em: , EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human	chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chrx thompspany. This seminance is not the entire insert of clone	RP13-383KS It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true left end of clone RP13-383KS is at 1 in this sequence. The true left and of clone RP13-383KS is at 15480 in this sequence.	This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats, but not necessarily within known such as compressions and repeats, but not necessarily within known such as companies and repeats within known the sequence is	ambiguous, there is an amotation using the 'unsure' feature key. RP13-183KS is from the library RPCI-13.2 constructed by the group of Pater de Jong. Por further details see http://www.chori.org/hacmac/home.htm	VECTOR: pBACe3.6. DNA was isolated from white blood cells obtained from a male chimpanzee (Pan troglodytes, Clint', Yerkes #C0471, birthdates = 6-6-80). The clone and detailed information can be obtained from ResGen (http://www.resgen.com) or Pieter de Jong and co-workers at http://www.bacpac.chori.org.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   360

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
                                                               This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality date (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
entire insert of this
    NOTICE: This sequence may not represent the entire insert of this close. I may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between naighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            DNA
                                                                                                                                                                               MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren
Department of Genetics, Washington University, St. Louis MO. For
